

Credit Conditions Through the Eyes of Consumers

Overview

The credit card market continued to expand in Q3, as steady job gains and rising wages bolstered consumption throughout the economy.

- 1) Monthly purchase volumes rose across risk tiers, led by super-prime accounts (+8.4 percent year-over-year).
- 2) The effective finance charge yield (a measure of interest payments relative to overall card usage) rose 9 basis points to 11.4 percent, reflecting tightening U.S. monetary policy and an uptick in accountholders who revolve a monthly balance. It remains well below levels from 2008 - 2010.
- 3) U.S. consumers appear to be prudently managing their credit card usage and debt. Credit card credit outstanding as a share of disposable income increased 7 basis points, but has not climbed above 5.45 percent or fallen below 5.15 percent in nearly five years.

Monthly Purchase Volume, by Risk Type

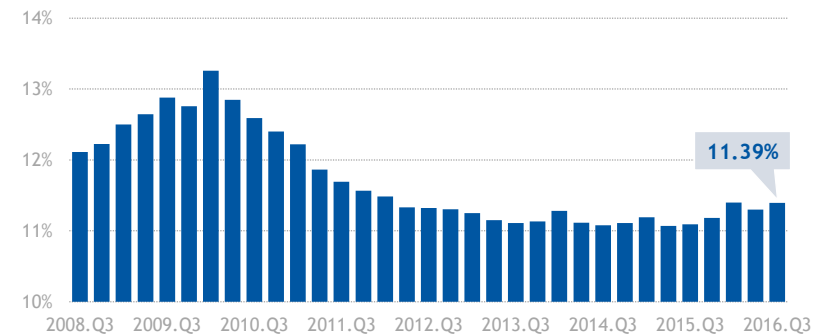

Monthly purchase volumes increased steadily in Q3 across all risk tiers. Year-over-year purchase volumes are up 6.2 percent (subprime), 6.9 percent (prime) and 8.4 percent (super-prime).

Broader Credit Market Conditions

Overview

The credit card market saw increases in account volumes and credit lines in Q3, particularly among the prime and subprime risk tiers.

- 1) The number of new accounts rose to 87.3 million in Q3, driven by a 19 percent year-over-year increase in subprime accounts. New subprime account openings currently comprise 20 percent of total accounts – roughly equivalent to 2012 levels.
- 2) Average credit lines increased steadily across risk tiers, particularly for new prime accounts (+2.7 percent from Q2 2016).

Average Credit Line (New Accounts*)

In Q3 2016, average credit lines for accounts opened in the previous 24 months continued to rise across risk tiers. New prime accounts saw the largest increase from last quarter (+2.7 percent).

Frequently Asked Questions: ABA Credit Card Industry Monitor

Q: What is the Credit Card Market Monitor?

The [American Bankers Association](#) (“ABA”) Credit Card Market Monitor (“Monitor”) provides key statistics on industry trends and relevant economic factors affecting the industry. The purpose of the report is for ABA to provide a clear, concise, and fact-driven assessment of credit card market conditions and to place current trends in both a historical and macroeconomic context. Additionally, the Monitor will occasionally be accompanied by a supplemental “Special Report” on a specific key issue in the credit card industry.

Q: How often and when is it released?

The Monitor is published quarterly, with the first report released in September 2013.

Q: Who publishes the report?

The report is published by the American Bankers Association. Data is provided by [Argus Information and Advisory Services](#), which serves as the leading provider of information services for U.S. financial institutions. Analytical support is provided by [Keybridge LLC](#), a boutique economic and public policy consulting firm with a diverse clientele of companies, associations, and other institutions that operate at the intersection of economics and public policy.

Q: Where do the data come from?

The data used in the report originate from proprietary industry databases and publicly available government sources. Specifically, the credit card data are taken from a nationally representative sample provided by Argus. Credit card data are presented as national averages for all accounts based on actual credit card account information. No individual account holder’s information or specific financial institution’s data can be identified from the data set. Other data used in the report are taken from various public and private sources, including the Department of Commerce’s Bureau of Economic Analysis and the Federal Reserve.

Q: How current are the data?

In all cases, the Monitor uses the latest available quarterly data, which are typically published several weeks after the end of each quarter. As a result, there is a time lag between the period of the latest available data and the Monitor’s publication date. Among the figures used in the Monitor, data typically lag by 1-2 quarters.

Q: What are the data elements included in the Monitor, and how are they defined?

Page 1 of the Monitor shows credit conditions through the eyes of consumers, while Page 2 depicts broader credit market conditions. Each page consists of four charts and includes an overview section followed by brief textual descriptions that accompany each chart. In some cases, charts are broken down by risk category (sub-prime, prime, and super-prime). These risk categories are

defined by Argus according to the following risk scores: (1) sub-prime <680, (2) prime 680-759, and (3) super-prime >759.

Page 1 Charts

- *Monthly Purchase Volume, by Risk Type*: The average amount of purchases paid for with credit cards per cardholder per month, for each risk category.
- *Credit Card Debt Outstanding as a Share of Disposable Income*: Credit Card Debt-to-Income is a commonly used ratio to indicate cardholders' ability to repay their credit card balances. Outstanding Credit Card Debt measures the aggregate amount of outstanding credit card loans held by U.S. households as reported by the Federal Reserve. Disposable Income is the aggregate amount of money available to individuals after saving and income taxes as reported by the Federal Reserve.
- *Effective Finance Charge Yield*: This credit card rate, sourced from Argus, represents the average effective finance charge yield on all accounts. The effective finance charge yield is the annualized interest income generated by a portfolio expressed as a percentage of a portfolio's assets.
- *Distribution of Accounts by Behavior Type*: The share of credit card accounts by three behavior categories: (1) "Transactors," or accounts that have purchases, fees, and/or a balance during the quarter but have no finance charges (net of reversals) in any month of a quarter; (2) "Revolvers," or accounts for which some percentage of the monthly balance is rolled over to the next month at least once during a quarter; and (3) "Dormants," or accounts that show no activity over the course of the quarter.

Page 2 Charts

- *Average Credit Line (New Accounts)*: The average line of credit on accounts opened in the last 24 months, by risk category.
- *Average Credit Line (All Accounts)*: The average line of credit on open accounts, by risk category.
- *Number of New Accounts*: The number of accounts opened within the past 24 months of a given quarter, by risk category.
- *Number of All Accounts*: The total number of open accounts in a given quarter, by risk category.

Q: Where can I find past editions of the report, and who is the point of contact?

Past editions of the Monitor are available at ABA's website (www.aba.com). For inquiries related to the Monitor, please contact Jeff Sigmund, ABA VP for Public Relations, at 202-663-5439.
